

Digital Printing

► Features

- Full colour graphical signs
- Wide range of different materials
- Dye based ink for interior UV and solvent for exterior
- Print height up to 2000mm. No maximum width (image can be joined if necessary for larger height)
- Print direct on to the substrate

► Benefits

- Fast turnaround (same day if required)
- Increases impact of sign
- Corporate identity

► Applications

- Vinyl, banner, mesh, frontlit/backlit (lightbox), exhibition (pop up displays), canvas, direct to substrate

Digital printing is a versatile and contemporary medium which allows us to print high resolution designs onto a wide variety of vinyls, solid substrates such as aluminium, di-bond, plastic, foam and acrylic together with canvas, backlit material for exhibition stands, banners, mesh wraps and paper.

The lifespan of digital prints can be extended by the application of UV laminates or anti-graffiti films. Using Pantone colour references we can accurately reproduce corporate logos, military insignia, artistic impressions and photographs.

Digital Print Resolution – dpi (dots per inch)		Viewing Distance
2440 dpi	Photo quality internal signage, exhibition / POS material.	< 1m
1440/720 dpi	External signage, applied vinyl, wraps, logos and insignia.	1m – 5m
360 dpi	Large format direct to substrate prints, site boards and shop fronts.	> 5m

Stocksigns have been great at working in partnership with us... After the design has been approved, they will print and apply tough anti-graffiti vinyl wrap to the main panel of our kiosks. The vinyl wrap service is very popular with our customers as it can be updated when required so that the kiosk could be used for a different campaign or function. Stocksigns also apply silk screen logos to the upper panels for branding. We're really pleased with the results.
